

# ANTI-THEFT SOLUTION ON TRAIN TRANSPORT

BY: ALEANA Q, NIKHIL S, LIV B

## ISSUE

In rail transportation, there are still problems. A big problem in all transportation, which really affects the spiritual relief of many passengers, is the concern of theft, which has been a rising problem lately. Because passengers are constantly worrying about the safety of their belongings, it distracts them from fully enjoying the rail experience. Implementing a mobile innovation allows for convenient reliability for this generation, specifically, and ensures the protection of one's things and the peace of mind of the passenger.

JAPANESE MULTI-ECUBE LOCKBOX

## PRE-EXISTING INNOVATIONS

In the world, there are still many successful attempts at anti-theft. For example, in airports, there are luggage lockers where somebody can store their items for a short time. Hotels provide safes in guest rooms to store valuables. And in Japan, there is a similar system called the Multi-Ecube Lockbox, which allows travelers to reserve a locker through an app. They are mostly found in big, commercial stations, and this goes to show that employing a mobile lockbox system benefits the well-being of the passengers, which matters most in the dominant market.

## INNOVATION

Our innovation, LockBox, is an online app that allows users to safely store their valuables while traveling. We will have 2 dedicated cars on the train, one in the front and one in the back, where there are a bunch of safes/lockers. If you scan the QR code on the locker you want, you get sent to the app where you can rent out that locker for the rest of your ride. All you need to do is show proof of your ticket and pay a simple fee of $5, $7.50, and $10, for small, medium, and large lockers, respectively. Here, you can put any valuables you don't want to risk losing, and then enjoy the safety of your belongings! If you open the app, it'll tell you if anybody is tampering with it, what locker number you have, your train ticket information, and a button where you can lock and unlock your locker at your leisure! This allows passengers to travel confidently, knowing that their valuables are in good hands.

## COMMUNITY IMPORTANCE

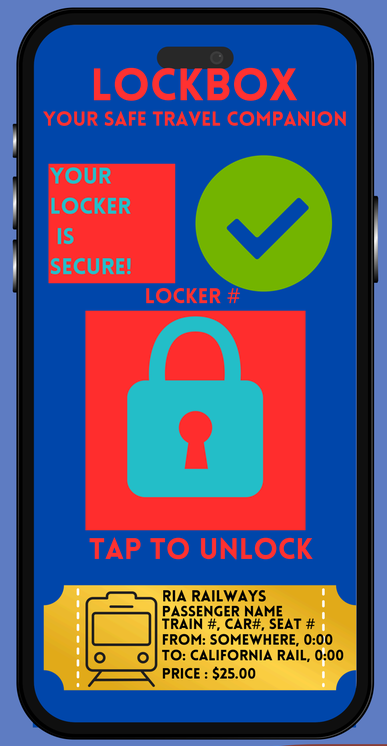

Every day, thousands of people from all over take the train. What do you think would help make taking the train a more enjoyable experience for passengers who are new to riding the train and passengers who have been on the train many times before alike?

Well, we would say that the mental ease that knowing that your valuables are safe makes the experience all the more enjoyable.

Providing more options on how to protect your belongings on trains and reducing stress and anxiety for the community.

## CONCLUSION AND NEXT STEPS

In conclusion, we have created a simple innovation to a very important problem in rail transportation. If we were to further expand our ideas on this innovation, there are many more possibilities for lock box technology. Our first step is to try to implement LockBox into our local trains and get the feedback needed to proceed. Then, we would make any necessary adjustments and hopefully partner up with major railroad companies like Amtrak and Southern Railway, and hopefully make the traveling experience better for passengers who constantly worry about their valuables. Also, it would be interesting to work on developing Lockbox to be more accessible to passengers with varying capabilities, heights, and item sizes.
